

CJC™ Blue Baleen

CJC™ Blue Baleen Oil Absorb System
Polishing of bilge water to below 5 ppm

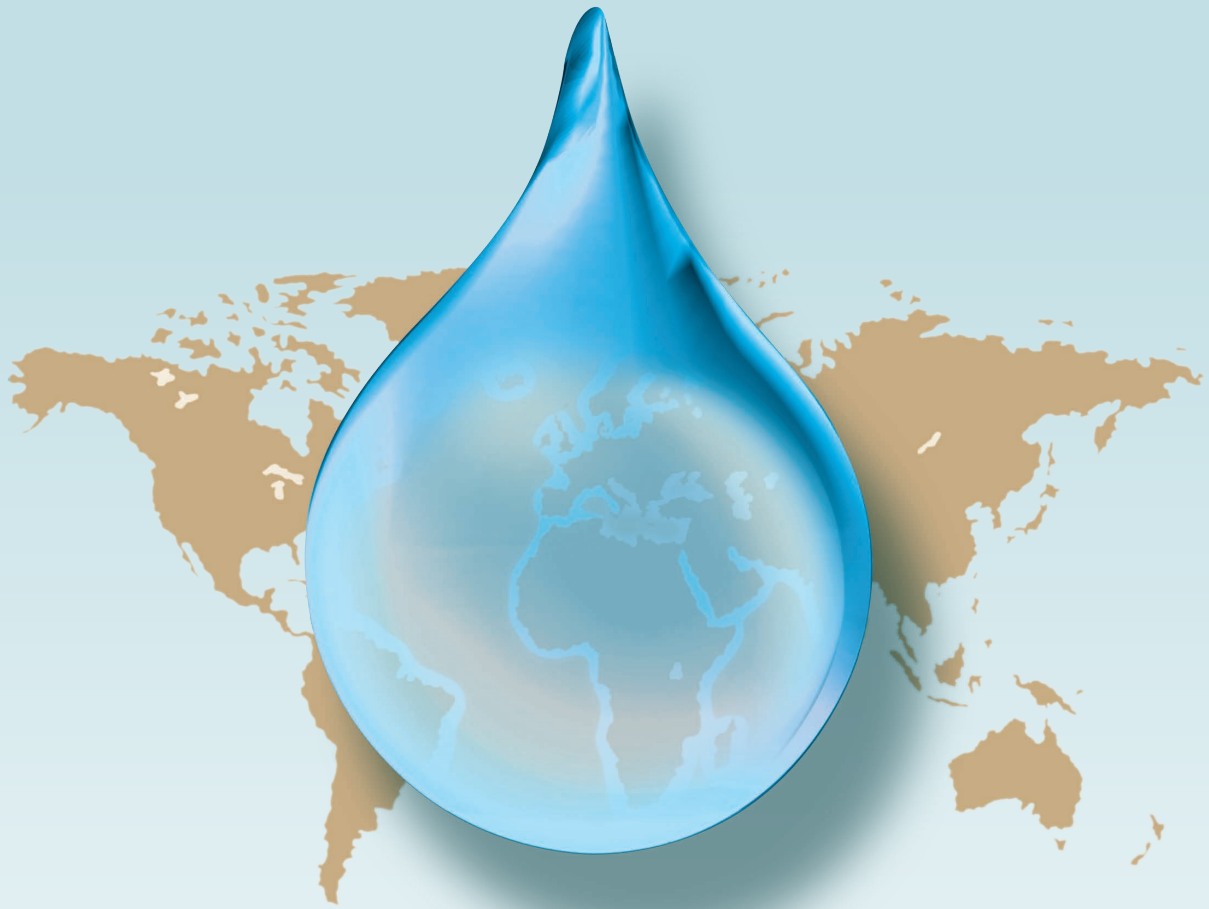

Clean bilge water
- Clean sailing

Clean bilge water - Clean sailing

The CJC™ Blue Baleen system ensures compliance with the environmental regulations

➤ Enhanced bilge water system and environmental image

Most ocean-going vessels operate an oily water separator for their bilge water separation system, however the oily water separator will often only perform to the required standard if recently cleaned and in working order. Even then, sometimes the oily water separator has problems dealing with bilge water.

The CJC™ Blue Baleen system helps to ensure compliance with the environmental regulations and safe-guards against oil spillage with bilge water over board.

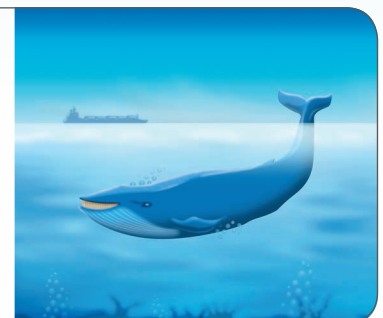

The CJC™ Blue Baleen OilAbsorb Insert is made of 100% organic and recyclable material

➤ Clean bilge water - Clean sailing

Baleen is the means by which baleen whales feed. These whales do not have teeth, but instead have rows of baleen plates in the upper jaw, looking like combs of thick hair. Whales use these combs for filter feeding. The blue whale is a baleen whale.

A unique principle

- the unique filtering principle removes oil from bilge water to a value of 5 ppm or lower

CJC™
Blue Baleen
Pre-Conditioner

CJC™
Blue Baleen
OilAbsorb 38/100

From the bilge water tank, bilge water is pumped to an oil water separator (15 ppm) and subsequently to the CJC™ Blue Baleen system

The combination of the CJC™ Blue Baleen Pre-Conditioner and the CJC™ Blue Baleen OilAbsorb system polishes bilge water to below 5 ppm

- clean enough to be discharged into the sea, ensuring compliance with the environmental regulations

➤ Less maintenance, reduced costs, enhanced environmental profile

Less maintenance

- Enhanced discharge capacity
- Easy to use - minimal maintenance

Reduced costs

- Reduced operational costs
- Easy to install and limited space requirements
- Higher oil holding capacity

Enhanced environmental profile

- Ensures compliance with the environmental regulations
- Ensures environmentally friendly operations
- Safeguard against pollution
- Cleans bilge water to below 5 ppm oil content
- Enables a new ISO 14001 target
- Enables a positive profile with Port State officials
